

## Review of Literature/ Experts

### Introduction

Tell me why this is important. State the problem in a single sentence. State the solution in a sentence. Tell why solving the problem will benefit the school. In a lead sentence lead me into the problem.

### Problem

What do experts say about your problem? Do they think this is a problem? What makes it a problem? This should include interviews and someone that has written on the subject. You need sources. Leave no stone unturned. For instance, if you are talking about lunches, What makes nutritious lunch how does eating to fast affect you.

### Solution

What do experts say in your favor? The information may not specifically say that your idea is a good one but you should be able to tie it to your project. For instance, there is a substantial amount of research that demonstrates that people work for rewards be it a

paycheck or time off. There is also research that demonstrates that rewards get better attendance at work and school. Don't think two dimensionally think of real world applications to what is happening in the school. You need sources. Just because you want and think it is a good idea does not make it so. Find sources to agree with you. For instance, experts tell us that we have to be proficient in technology for the coming future.

### Summary

Go back over all the main points that make your case for you.

### References

#### Example:

Ronin (2011) says that proper nutrition is essential to the success of students in the classroom. He goes on to say that lunch is as essential to student health as breakfast. This means that students that are not getting a nutritional lunch with time to eat are not operating at their peak performance. This can effect grades, attitudes, and whether a student is able to keep up in the classroom over the course of the day.
